

City of Harrington Multimodal Freight Terminal Study

Public Advisory Committee | August 12, 2021

Whitman, Requardt & Associates, LLP
Engineers · Architects · Environmental Planners Est. 1915

- Dover/Kent County Metropolitan Planning Organization
 - Plan funding and administration
- City of Harrington
 - Plan client
- DelDOT
 - Technical resources and reviews
- Whitman, Requardt & Associates, LLP (WRA)
 - Consultant transportation planners and engineers
 - Performed study and prepared plan

PLAN PURPOSE

- There is an unmet need in Kent County for large industrial development sites of ten or more acres.
- There is a demand for industrial properties that can be directly served by rail.
- There is a market for a multimodal terminal that will attract shipments from businesses that don't have direct rail access
- The City of Harrington needs new development that will provide jobs and promote economic growth.

PLAN PURPOSE

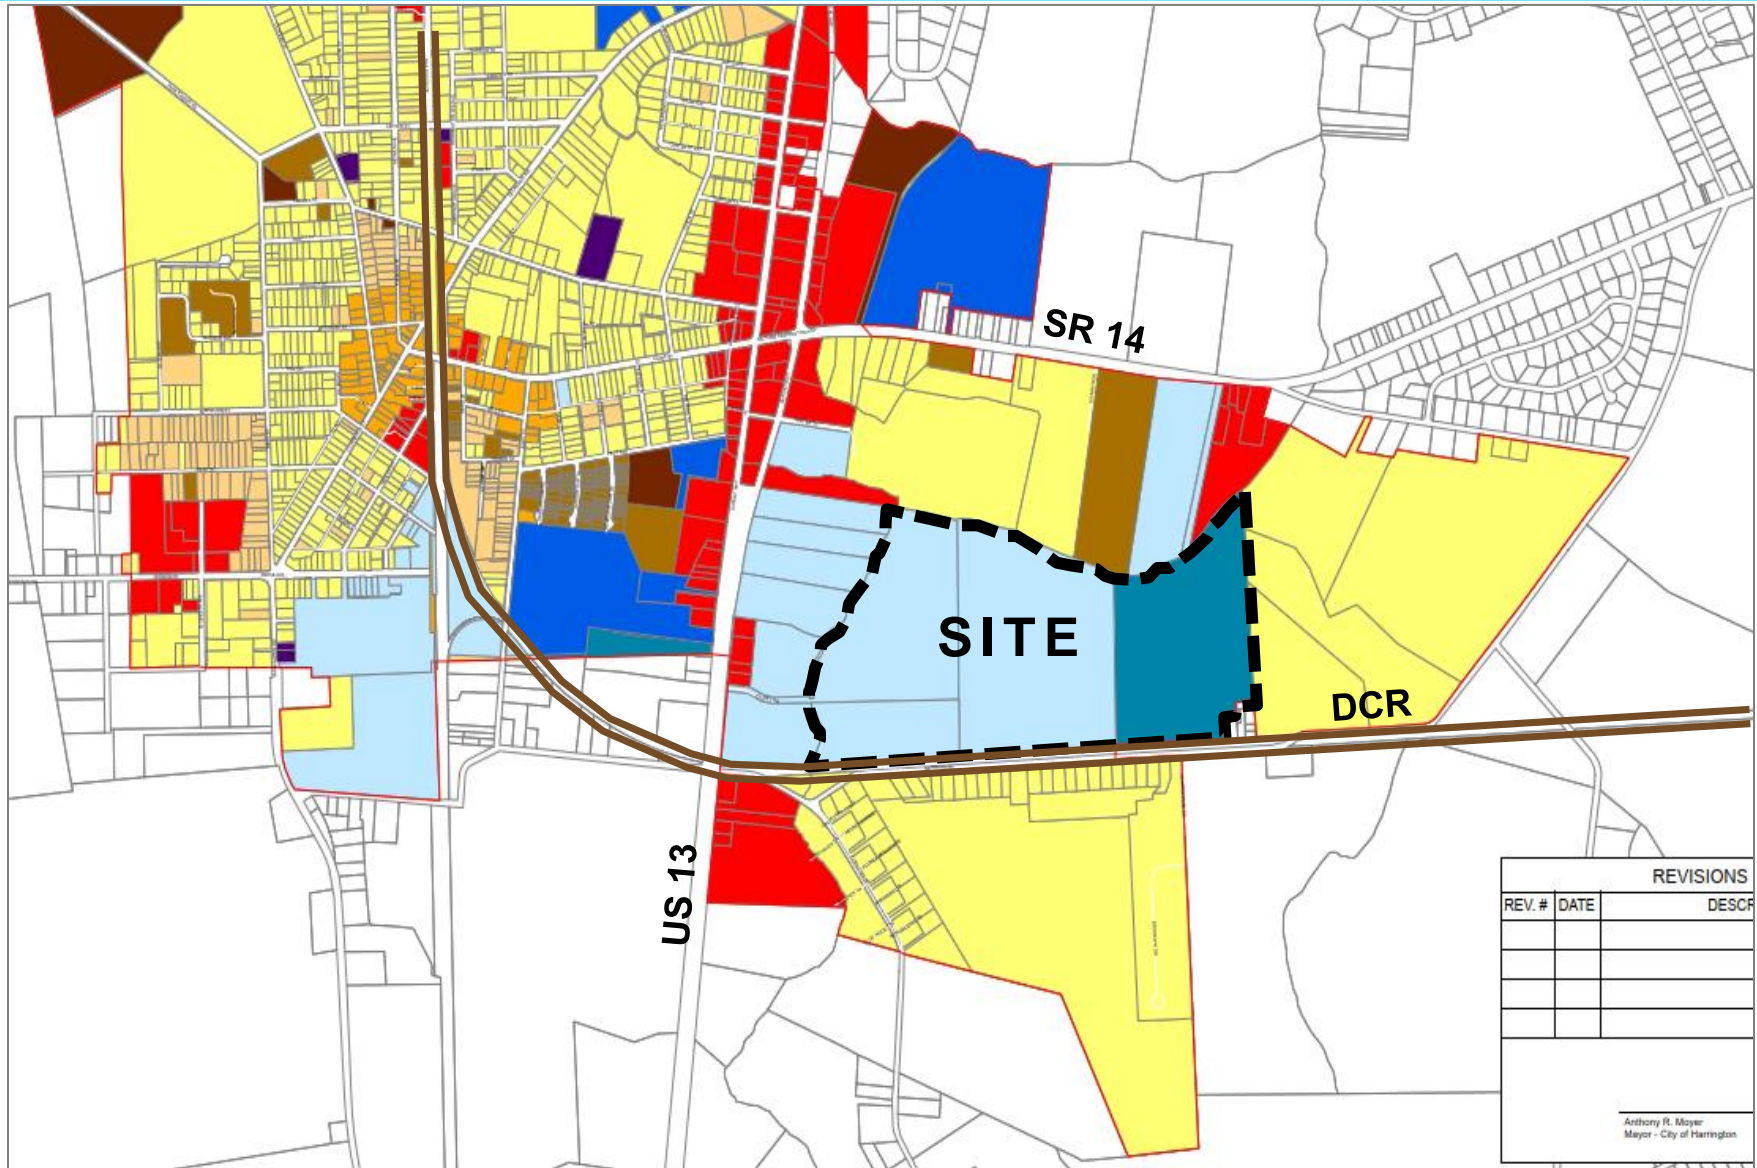

- **The purpose of the Harrington multimodal facility is to provide a greater opportunity for rail shipment of goods to Harrington and nearby portions of Kent and Sussex Counties, to meet a demand for rail-served industrial parcels, to create jobs, and to promote economic development in the City of Harrington.**

THE SITE

- Three properties adjacent to Delmarva Central Railroad
- One property owned by the City, two privately owned
- Zoned Industrial or Manufacturing
- 131 acres total
- One large existing building (O.A. Newton) but otherwise largely vacant

CONTEXT

Who assisted in the plan development?

STAKEHOLDERS

- City of Harrington
 - Led the coordination with adjacent property owners
 - City's engineer developed site water and sewer plan
 - Consulted an experienced terminal operator
- The private property owners
 - Essential participation in process and plan buy-in
- Delmarva Central Railroad
 - Sizing and layout of intermodal terminal
 - Review of track design for operational requirements
- Kent Economic Partnership
 - Information on industrial real estate market demands
 - Feedback on industrial park lot layout

How were project recommendations developed?

INTERMODAL TERMINAL

- Environmental constraints mapped
- Alternative terminal locations and rail configurations developed and discussed with DCR to select preferred rail layout

How were project recommendations developed?

- [illegible]

The Industrial Park

- 10 lots, 7 lots currently available
- 7 lots can provide direct rail service
- Potential for 750,000 s.f. of industrial buildings

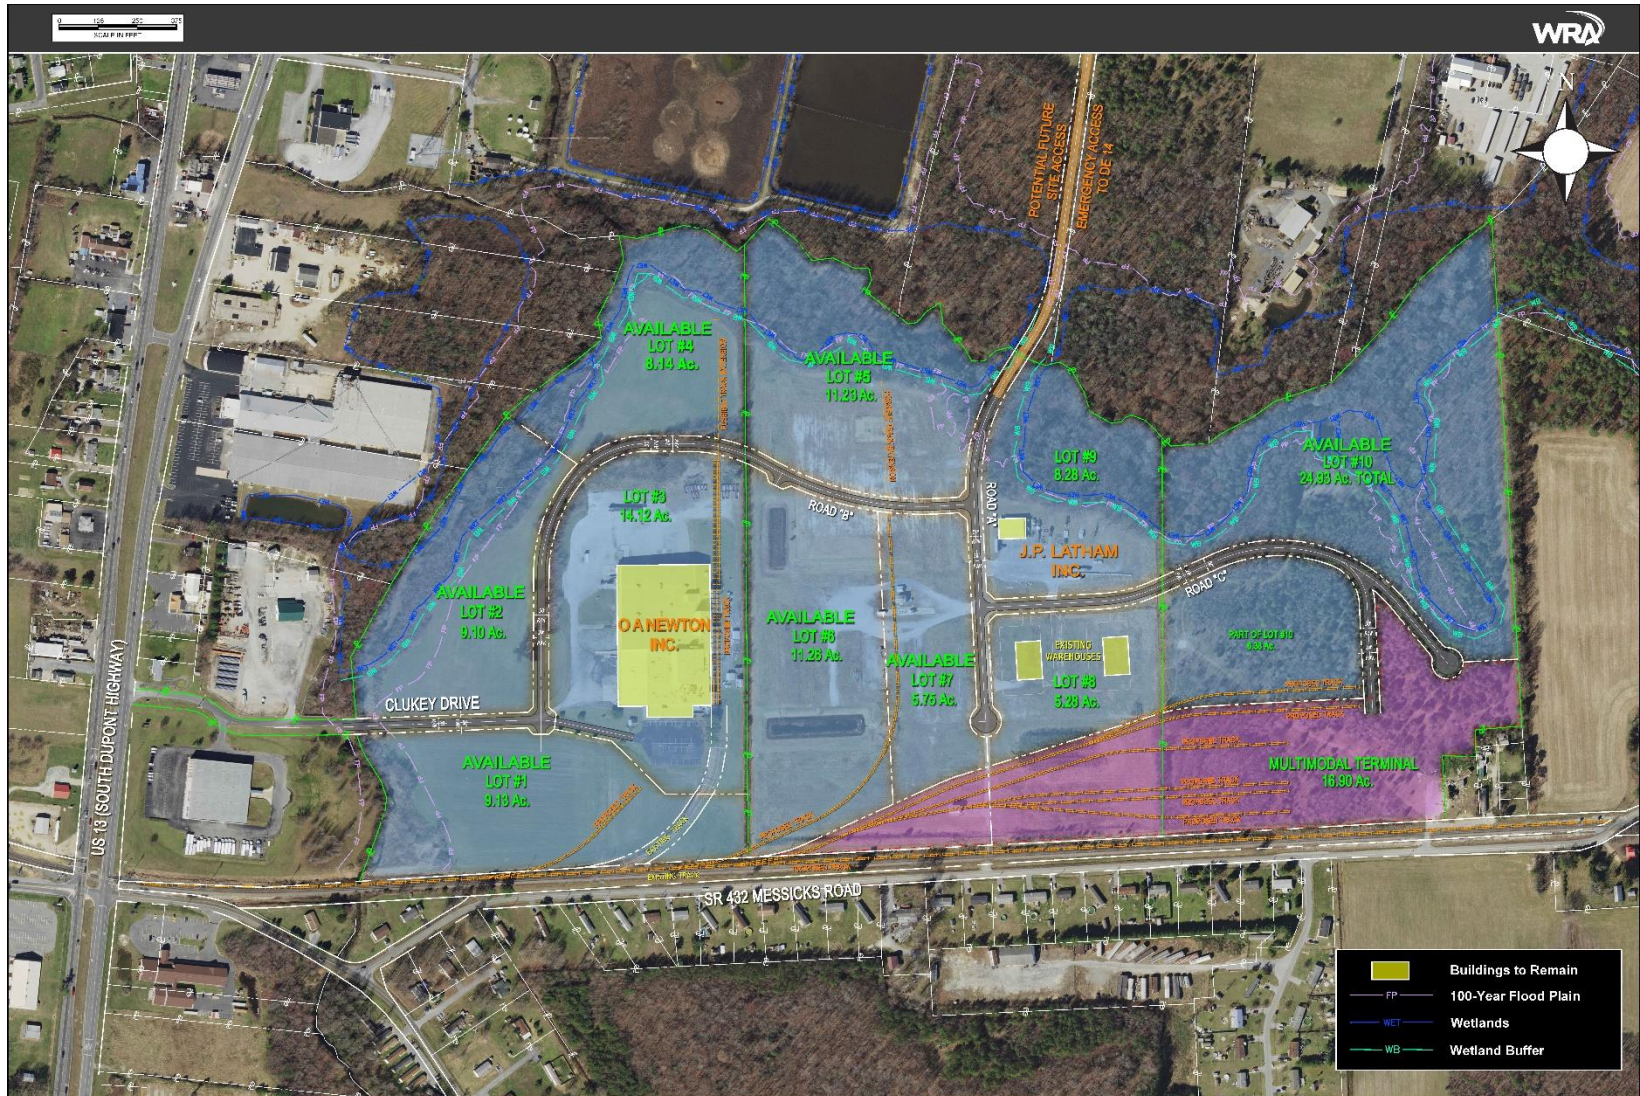

The Multimodal Terminal

- 16 acres with multiple tracks, perimeter fence, and weigh scale
- Existing market for transload of bulk goods from rail to truck estimated at 1,500 – 2,000 carloads per year
- Potential for future track extension to adjacent Schiff property

SITE ACCESS

- Clukey Drive will be the primary access
 - Road to be extended into the site to serve all lots and the intermodal terminal
 - Intersection modifications at US 13 and Clukey Drive
 - Clukey Drive is adequate to handle all site traffic
- Potential for future secondary access to Route 14

PREFERRED ALTERNATIVE

COST

- Site infrastructure (roadway, water and sewer utilities): approximately **\$5.3 million**
- Rail improvements and terminal: approximately **\$15 million**
- Funding from state and federal sources is actively being pursued

IMPLEMENTATION

- The City of Harrington will take the lead in coordination of activities needed for implementation
- DCR will provide design services for rail and support for grant applications
- Kent Economic Partnership will assist in marketing the industrial sites

Thank you!
